BACKGROUND

Plant, Equipment, Machinery and Building deteriorate due to their use and exposure to environment conditions. If this process is allowed to be continued unchecked, these facilities become unserviceable and bring them to standstill. Industry has therefore, no choice but to attend to them from time to time, to repair recondition and condition monitoring them to be able to increase their life to extent it is economically and physically possible to do so. It is in this context that maintenance assumes at most importance as an engineering plant and equipment is available for productive use, for the scheduled hours, operating at agreed standard with minimum waste. The strategic importance of maintenance increases with increasing sophistication. With an overall objective is to maximize production output at minimum total cost, effective maintenance management forms an important approach to reducing total manufacturing costs and improves productivity of the production process. Thus, there is need to have an Exhibition to attract the Indian engineering and Manufacturing sector focusing on Maintenance, Service & Care for Indian Industry to enhance the productivity and reduce downtime for a better growth.
