BACKGROUND

Maintenance Costs are a major part of the total Operating costs to all manufacturing or Production plants. Depending on the specific industry, Maintenance costs can represent between 15-40% of the costs of goods produced

The impact of corrosion on the nation's exchequers is a staggering figure of Rs 2 lakh crores

The result of ineffective maintenance management represents a huge monetary loss every year. Perhaps more important is that the fact that our ineffective management of maintenance dramatically impacts our ability to manufacture quality products that are competitive in the world market

The loss of production time and product quality that results from poor or inadequate maintenance management has had a dramatic impact on our ability to compete with Japan and other countries that have implemented more advanced manufacturing and Maintenance philosophies.

However with the technological developments, they have provided means to reduce or eliminate unnecessary repairs, prevent catastrophic machine failures, reduce the negative impact or the maintenance operation on the profitability of manufacturing and production plants.

Maintenance plays a vital role in the profitability of the organization.

The 2nd Edition of Industrial Maintenance Expo with a attempt to address the challenges and the needs of the Industry with an objective of Zero Break downs
